Educational
Flexible engineering centre,
Grimsby

The building brief called for an open-plan Flexible Engineering Centre with associated support facilities including a state of the art Modern Learning Environment. The engineering centre provides a flexible learning environment which is zoned to reflect specific engineering topics.

Each zone is supported by moveable classrooms which can adapt to the changing college curriculum.

The contemporary language of the building is a reflection of the site conditions aswell as the client's specific building brief. The large flexible engineering space has a curved roofline which rises to meet the support and study zones. The building responds to public external space and acts as a positive focus for student activity aswell as providing a dynamic advertisement for the college within the local region.
